

PHASE 7: PROJECT DOCUMENTATION

7.1 Objective

The objective of the Documentation Phase is to record the complete project process, configuration, testing evidence, and final outcome in a clear and reusable format.

7.2 Project Introduction Documentation

The documentation begins by recording:

- Project title.
- Project objective.
- Project scope.
- Problem statement.
- Proposed solution.

7.3 Phase-Wise Documentation

Each phase of the project is documented from:

Ideation → Requirement Analysis → Design → Planning → Development → Testing → Documentation → Demonstration

This creates a complete record of how the project was developed.

7.4 Requirement Documentation

The documented requirements describe:

- Requester details.
- Request information.
- Standard laptop condition.
- Approval requirements.
- Approved actions.
- Rejected actions.
- Status updates.
- Process visibility.

7.5 Workflow Documentation

The workflow structure is recorded in the documentation as:

**Trigger → Condition → Approval → Approved/Rejected Branch →
Fulfilment/Notification → Completion**

7.6 Configuration Documentation

The Flow Designer implementation is documented along with the important automation steps.

The documentation describes how the trigger, conditions, approvals, branches, and actions are configured.

7.7 Screenshot Evidence

Screenshots are included as evidence for the configuration and execution of the project.

These screenshots support the explanation of the Flow Designer setup and its operation.

7.8 Testing Documentation

Test scenarios and observed results are documented to show whether the project behaves correctly under different conditions.

7.9 Outcome Documentation

The final documentation records:

- Final outcome.
- Configuration evidence.
- Testing evidence.
- Limitations.
- Possible future enhancements.

7.10 Expected Output

The result of this phase is a complete phase-wise project document that can be used as the final project record.

7.11 Phase Result

The Documentation Phase converts the development and testing activities into a structured project report containing the requirements, design, implementation, evidence, results, and future improvements.
